

Production

*Through our partnership to Merten GmbH, we have a 85-year-old know-how in manufacturing of precisionmechanical parts.
The range includes:*

Merten Maschinenbau und Vertriebs GmbH Engineering

The core competence of our engineering is the development of machines and conveyor systems for post-press systems in printing and bookbinding, and in finding optimal solutions for their shipping logistics space.

The mechanical and electrical design and construction extends from prototype to continue into production.

Procurement & Logistics

To meet the quality and delivery time requirements of our customers, we need an efficient procurement and logistics management. By using a completely new PPS system, it is possible to check turnaround times and process costs and improve constantly.

The procurement is based on customer requirements and processing time and operates at the regional as well as on international procurement markets.

Assembly

The field of application of our technicians ranges from the installation of standard machine components to prototype to own test spaces. In addition to the mechanical assembly of course there are the electrical assembly and the cabinet.

Even start-ups and repairs outside the home, nationally and internationally, are a matter of course.

Service

Our staff will assist you from planning to after-sales service, with the goal of optimal customer satisfaction.

The following services are self-evident:

- Technical Advice
- Technological assistance
- Spare parts
- Maintenance and repair of used machines
- Training of customer personnel
- CE documentation for delivered machines and systems
